Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS • I want to know where my money is going. • I need simple budget recommendations. • I want suggestions that fit my spending.	THINKS • I think I spend too much on unnecessary things. • I need help deciding what I can afford. • I want useful recommendations within my budget.
PERSONA COLLEGE STUDENT	
DOES • Tracks daily expenses and spending. • Checks available budget before buying. • Uses recommendations to plan purchases.	FEELS • Worried about overspending. • Confused about managing money effectively. • Feels confident when spending is planned.
