Project Proposal (Proposed Solution) report

Pocket Smart AI is a smart personal finance solution that helps users track expenses, manage budgets, and understand spending patterns. It uses AI-powered insights to provide simple, personalized guidance for better day-to-day money management.

Project Overview	
Objective	The primary objective is to help users manage personal finances through automated expense tracking, budget monitoring, and AI-powered financial insights.
Scope	The project covers expense recording, category-wise spending analysis, budget tracking, smart alerts, and personalized recommendations through a simple user interface.
Problem Statement	
Description	Users often find it difficult to track daily expenses, maintain budgets, and identify unnecessary spending. Manual methods can be time-consuming and inconsistent.
Impact	The solution can make personal finance tracking easier, improve spending awareness, support timely budget decisions, and help users develop better financial habits.
Proposed Solution	
Approach	Use a web-based application with an AI service to record and analyze transactions, identify spending patterns, monitor budgets, and generate personalized financial insights.
Key Features	- AI-assisted expense categorization - Budget tracking and spending analysis

	- Smart alerts for unusual or budget-limit spending - Personalized financial insights and recommendations

Resource Requirements

Resource Type	Description	Specification/Allocation
Hardware		
Computing Resources	Development laptop / cloud CPU	Suitable for web and AI development workloads
Memory	RAM specifications	8 GB RAM
Storage	Project and database storage	20 GB+ storage
Software		
Frameworks	Backend / application framework	Python FastAPI
Libraries	Supporting libraries and UI tools	React.js, Tailwind CSS, pandas, numpy
Development Environment	IDE / development environment	VS Code / Jupyter Notebook
Data		
Data	Data source and format	User-entered transaction, budget and profile data
