

Project Executable Files

Date	2 October 2026
Team ID	SWTID-2026-1309
Project Name	Pocket Smart AI
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes / No / NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	NA
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA
8	Dockerfile / Containerization config (if applicable)	NA
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	NA

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

pocket-smart-ai/	Project root
-- frontend/	User interface
-- backend/	Application logic and APIs
-- ai/	AI insights and recommendations
-- database/	Schema and seed data
-- tests/	Functional and performance tests
-- config/	Environment configuration
-- README.md	Setup and run instructions
-- requirements.txt	Python dependencies
`-- .env.example	Environment variable template

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	Not provided — local evaluation
Login Credentials (Demo)	Demo credentials: Not provided
Platform / Hosting Provider	Local development environment
Repository Link	Repository link: Not provided
Demo Video Link	Demo video link: Not provided

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

Pre-requisites:

Python 3.x, a supported browser, project dependencies, and access to configured database/AI services.

Step 1:

Place the Pocket Smart AI project files in the project folder.

Step 2:

Create and activate a virtual environment, then install dependencies from requirements.txt.

Step 3:

Create the local .env file from .env.example and provide the required configuration.

Step 4:

Initialize the database using the supplied schema/seed files, if required.

Step 5:

Start the backend/application using the startup command defined in README.md.

Step 6:

Open the application in the browser using the local address shown by the running service.

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Hosted deployment URL is not provided	Use local evaluation; add the hosted URL when deployment is available.
2	Demo login credentials are not provided	Create a local test account for evaluator access.
3	Exact startup command depends on final implementation	Follow the README.md and supplied configuration files.
