

## Technology Stack

|                      |                  |
|----------------------|------------------|
| <b>Date</b>          | 2-10-2026        |
| <b>Team ID</b>       | :SWTID-2026-1309 |
| <b>Project Name</b>  | :Pocket Smart AI |
| <b>Maximum Marks</b> | 2 Marks          |

### Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

### Technology Stack Details

| S.No | Architecture Component / Layer                                               | Technology Chosen       | Justification / Purpose                                                                      |
|------|------------------------------------------------------------------------------|-------------------------|----------------------------------------------------------------------------------------------|
| 1    | <b>Frontend / Client-Side</b><br><br><i>(e.g., React, Angular, HTML/CSS)</i> | React.js + Tailwind CSS | Responsive and reusable UI components for a simple, mobile-friendly smart finance interface. |

|   |                                                                                      |                         |                                                                                              |
|---|--------------------------------------------------------------------------------------|-------------------------|----------------------------------------------------------------------------------------------|
| 2 | <b>Backend / Server-Side</b><br><br><i>(e.g., Node.js, Python/Django, Java)</i>      | Python FastAPI          | Fast API development for AI services and lightweight backend request handling.               |
| 3 | <b>Database / Data Storage</b><br><br><i>(e.g., MySQL, MongoDB, PostgreSQL)</i>      | PostgreSQL              | Reliable relational storage for user profiles, transactions, budgets, and financial records. |
| 4 | <b>Cloud / Hosting / Deployment</b><br><br><i>(e.g., AWS, Azure, Heroku, Docker)</i> | Docker + Render         | Containerized deployment with simple, scalable and cost-effective hosting.                   |
| 5 | <b>Version Control &amp; CI/CD</b>                                                   | GitHub + GitHub Actions | Team collaboration, version tracking, automated testing, and CI workflows.                   |

|          |                                                                                         |            |                                                                                     |
|----------|-----------------------------------------------------------------------------------------|------------|-------------------------------------------------------------------------------------|
|          | <i>(e.g., GitHub, GitLab, Jenkins)</i>                                                  | OpenAI API | Provides AI-powered assistance and personalized insights for Pocket Smart AI users. |
| <b>6</b> | <b>Third-Party APIs / Other Tools</b><br><br><i>(e.g., Stripe, Twilio, Google Maps)</i> |            |                                                                                     |
